

# DKSW Rotation Angle Setting Table

Because stopper bolts are not mounted on **DKSW** as of shipping, it rotates 360° .  
 Mount the included stopper bolts to restrict the control panel rotation angle.  
 Use two stopper bolts to set the rotation angle.  
 When restricting the rotation angle to 270° , use only one stopper bolt.

## Relationship of control panel rotation angle restriction pattern and stopper bolt/locating plate

Rotation direction		Right rotation (clockwise)	Left rotation (counterclockwise)
Locating plate (control panel) rotation angle	60°		
	90°		
	120°		
	180°		
	240°		
	270°		

- The figure shows DKSW as seen from the bottom. The figure in the table shows the reference positions of the stopper bolts and locating plate.
- The rotation direction when seen from above is the reference.
